

SINGER PAB 13-8 MOTOR (110-120 v) FOR 400 CLASS MACHINE

www.tandtrepair.com

Note: The diagram appears to show the controller leads being hooked to the outer terminals, this is not correct.

The pins are usually numbered
 Pin 1 - light & control plug wires
 Pin 2 - control & motor lead
 Pin 3 - light & motor plugs wires
 Now there is a chance I have 1 & 3 crossed as far as the motor and control wires.
 But will work this way.
